

HARBOR-CLTM

FULLY PROTECTED CHLORIDE

SOIL
&
FOLIAR

HARBOR-CLTM

BENEFITS:

DESIGNED FOR FOLIAR, SOIL & IMPREGNATION APPLICATIONS

PROTECTED FROM TIE-UP IN SOIL & PLANT TISSUE

LOW USE RATES

MIXES WELL WITH MOST COMMONLY USED FERTILIZERS & PESTICIDES

SUPERIOR CROP SAFETY FOR FOLIAR APPLICATIONS

HARBOR™-CI

FULLY PROTECTED CHLORIDE

HARBOR™-CI is a fully protected chloride, designed to outperform traditional potassium chloride fertilizers in both soil and foliar applications. In soil applied applications **HARBOR™-CI** doesn't tie-up in the soil like KCl fertilizers can. In foliar applied applications **HARBOR™-CI** is taken up more rapidly by the leaves - and is protected from tie-up in the plant tissue. **SOLUMETRIX™** soil tests have shown that many fields across Western Canada would benefit from an application of **HARBOR™-CI** as many soils show a deficiency in chloride.

NUTRIENT ANALYSIS

Percent Chloride (Cl)..... 7.00%

Net Weight: 1.099 kg/L (9.17 lb/gal)

USE GUIDELINES

RATE OF APPLICATION

Foliar & Soil Applications: 0.62L/ha -2.47L/ha (250mL - 1L/acre). For best results follow a **SOLUMETRIX™** soil test recommendation.

APPLICATION TIMING

Applications of **HARBOR™-CI** have shown to have best results when applied during mid-late season, with critical timing being early tillering through heading. Best foliar results and plant safety will be obtained when applications are applied early morning or late evening, when the stomata are open.

COMPATIBILITY

HARBOR™-CI is compatible with most commonly used fertilizers and pesticides. Adding additional water to tank mixes will always improve compatibility. Always establish compatibility using the standard jar test method prior to tank mixing.

STORAGE

Do not store below 0°C. Salt-out may occur if storage recommendations aren't strictly followed.
