

HARBORTM-IronMan

FULLY PROTECTED MICRONUTRIENT BLEND

SOIL
&
FOLIAR

HARBORTM-IronMan

BENEFITS:

DESIGNED FOR FOLIAR, SOIL & IMPREGNATION APPLICATIONS

PROTECTED FROM TIE-UP IN SOIL & PLANT TISSUE

LOW USE RATES

MIXES WELL WITH MOST COMMONLY USED FERTILIZERS & PESTICIDES

MIXES WELL WITH NEGATIVELY CHARGED NUTRIENTS SUCH AS PHOSPHATE

SUPERIOR CROP SAFETY FOR FOLIAR APPLICATIONS

DESIGNED TO ADDRESS IRON & MANGANESE DEFICIENCIES IN WESTERN CANADIAN SOILS

HARBOR™-IronMan

FULLY PROTECTED MICRONUTRIENT BLEND

HARBOR™-IronMan is a fully protected blend of iron and manganese, designed to outperform traditional Fe & Mn fertilizers in both soil and foliar applications. In soil applied applications HARBOR™-IronMan doesn't tie-up in the soil like other Fe & Mn fertilizers can. In foliar applied applications HARBOR™-IronMan is taken up more rapidly by the leaves - and every nutrient is fully protected within the blend - unlike many other foliar products where some or all nutrients are unprotected from tie-up in the plant tissue. SOLUMETRIX™ soil tests have shown that many fields across Western Canada would benefit from an application of HARBOR™-IronMan as many soils show a deficiency in both iron and manganese.

NUTRIENT ANALYSIS

Iron (Fe)..... 5.00%
Manganese (Mn) 0.50%

Derived From: Ferric Oxide, Manganese Carbonate

Net Weight 1.243 kg/L (10.37 lb/gal)

USE GUIDELINES

RATE OF APPLICATION

Foliar & Soil Applications: 0.49L /ha - 2.47L/ha (200mL-1L/acre). For best results follow a SOLUMETRIX™ soil test recommendation.

APPLICATION TIMING

Applications of HARBOR™-IronMan have shown to have best results when applied early to mid-season. Best foliar results and plant safety will be obtained when applications are applied early morning or late evening, when the stomata are open.

COMPATIBILITY

HARBOR™-IronMan is compatible with most commonly used fertilizers and pesticides. Adding additional water to tank mixes will always improve compatibility. Always establish compatibility using the standard jar test method prior to tank mixing.

STORAGE

Do not store below 0°C. Salt-out may occur if storage recommendations aren't strictly followed.
