

HARBOR™-S

FULLY PROTECTED SULPHUR

SOIL
&
FOLIAR

HARBOR™-S

BENEFITS:

DESIGNED FOR FOLIAR, SOIL & IMPREGNATION APPLICATIONS

PROTECTED FROM TIE-UP IN SOIL & PLANT TISSUE

LOW USE RATES

MIXES WELL WITH MOST COMMONLY USED FERTILIZERS & PESTICIDES

SUPERIOR CROP SAFETY FOR FOLIAR APPLICATIONS

HARBOR™-S

FULLY PROTECTED SULPHUR

HARBOR™-S is a fully protected form of sulphur, designed to outperform traditional sulphur fertilizers in both soil and foliar applications. **HARBOR™-S** will not react with calcium in the soil or cell walls, unlike most popular sulphur products such as ammonium sulfate and ammonium thiosulfate. **SOLUMETRIX™** soil tests have shown that many fields across Western Canada are deficient in sulphur. At a rate of 1 litre per acre, **HARBOR™-S** can replace up to 17 units of soil-applied S.

NUTRIENT ANALYSIS

Sulfur (S) 6.00%

Derived from: Elemental Sulphur

Net Weight: 1.033kg/L (8.62lb/gal)

USE GUIDELINES

RATE OF APPLICATION

Foliar & Soil Applications: 1.24 L/ha - 4.94 L/ha (0.5L/acre - 2 L/acre.) For best results follow a **SOLUMETRIX™** soil test recommendation.

APPLICATION TIMING

Applications of **HARBOR™-S** have shown the best results when applied early to mid-season and during the reproductive stages. Best foliar results and plant safety will be obtained when applications are applied early morning or late evening, when the stomata are open.

COMPATIBILITY

HARBOR™-S is compatible with most commonly used fertilizers and pesticides. Adding additional water to tank mixes will always improve compatibility. Always establish compatibility using the standard jar test method prior to tank mixing.

STORAGE

Do not store below 0°C. Salt-out may occur if storage recommendations aren't strictly followed.
